DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on December 11, 2003 has been entered.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Jerry Yetter on December 31, 2003.

The application has been amended as follows:

At page 1, line 1 of the specification, insert ---This application claims priority from US Provisional Applications 60/126,074, filed March 25, 1999; 60/148,053, filed August 10, 1999; and 60/103,978, filed October 13, 1998.---

At line 5 of claim 1, replace [peperazine] with ---piperazine---.

Allowable Subject Matter

3. Claims 1, 4-7 and 14-18 are allowed.

4. The following is a statement of reasons for the indication of allowable subject matter: The closest prior art of record is Panandiker et al., US 6,228,828 B1. The reference discloses laundry detergent compositions containing anionically modified cyclic amine-based polymers. Among the polymers disclosed are imidazole-epichlorohydrin polymers endcapped with chloroacetic acid. Considered broadly, this is an imidazole-epichlorohydrin adduct, and its formulation with anionic surfactants is exemplified. However, applicant's specification draws a distinction between amine-epichlorohydrin adducts and amine-epichlorohydrin adducts which have been modified to contain anionic groups. Only the former are presently claimed, while the polymers of the reference must be anionically modified. The broadest reasonable construal of amine-epichlorohydrin adducts, *considered with regard to the specification*, does not include anionically modified materials. Accordingly, the polymers presently claimed are not obvious over, nor disclosed by the prior art.
